Introduction

The Security Team suggests using a scraping prevention system if our project ends up having a web interface displaying the data we collected and processed to fit the needs of our customers.

Preventing concurrents vineyards from easily scraping the data of our customers is important for the Confidentiality Security of this project.

Content

The Security Team suggests the solution cloudflare to solve this problematic. Cloudflare is not open source but is one of the leader on the market in terms of scraping prevention softwares.

The Security Team is also open to other suggestions.

We suggest the Business licence for cloudflare, for the additionnals security options that come with that licence plan.

Tools suggested and required budget

- Cloudfare Business licence (200 € / mois)
- One (1) day of man power (800€)
